Experience

Software Engineer @ Chartboost

San Francisco, California -- 2015-06 to present

Chartboost (chartboost.com) runs an ad network for mobile games. I was a member of the data team specializing in pipelines and web APIs.

Spring 1 Alumnus @ the Recurse Center

Manhattan, New York -- 2015-02 to present

The Recurse Center is a self-directed educational retreat for software developers. While there I started Comic Gator; a project that aggregates webcomics and allows users to generate RSS feeds. Notable features:

- CDB: the comic database designed in PostgreSQL and organized by sqitch.
- Maestro: a web API implemented in Scala/Play.
- Lurker: a web crawler.
- Line Cook: an RSS feed pipeline.
- Lunch Time: a web app for configuring feeds.

Software Engineer @ Lexity --> Yahoo

Silicon Valley, California -- 2013-01 to 2014-08

Lexity was a startup that built applications for small and medium-sized e-commerce merchants. Our products included: algorithmic bidding for comparison shopping sites, retargeting, and a sophisticated ROI tracking system.

We were acquired by Yahoo in August of 2013 and became Yahoo Commerce Central (commercecentral.yahoo.com). I owned the merchant data extraction and normalization service.

Skills

- Real stuff with Python and Scala.
- Commandlinefu with Python, *nix, and Docker.
- Creation and consumption of web APIs with REST, RPC, and SOAP.
- Data pipelines with Jenkins and Airflow.
- Database-friendly with MySQL, PostgreSQL, Mongo, Redshift, Hive, and Elasticsearch.
